We recently received advice regarding the fitment specifications on the Foton Tunland (2012 onwards), accompanied with an image of our 16x8 P35 Jackal wheels with 265/75R16 tyres fitted.

As such, we can confirm that this offset (35P) is optimal for 8" wide wheels. There is a raised knob on the control arm that risks fouling on the wider width wheels, but the 35P clears by 10mm, and we're told that 25P with the larger tyres risks protrusion from the outer guard line.

Please be mindful however that with a larger section width tyre, 35P could risk rubbing on the aforementioned control arm and in such instances, 25P could be more suited.

Additionally, 18" wheels with large tyre specs could foul on the guards or the control arm... Treat on a case by case basis. Wheels with a lower offset and a narrower wheel width will still be suitable however.

For further information on these applicable wheels and more, visit our fitment guide online today at:
