Centre Bore Location (CBL) Rings

Hub locating rings (CBL Rings) are essential when fitting some of our CSA alloy wheels. Hub locating rings are required to ensure that the wheel correctly locates onto the vehicle hub (the hub register).

The inside diameter of the CBL ring will be 0.1mm larger than the vehicle hub register, allowing for an interference fit. CBL rings ensure that the wheel, when fitted, is located centrally. The CBL ring "locates" the wheel. The nuts/studs then hold the wheel in place.

Unless the wheel is machined hub centric (the exact correct hub size for the vehicle – does not require CBL ring), then we must supply CBL ring to complete the job.

Detailed below are our CBL ring specifications.
